SUMMARY

AI Engineer with experience across traditional machine learning, generative AI, and full-stack systems development. Built and optimized recommendation systems, churn prediction pipelines, and Retrieval-Augmented Generation applications, delivering measurable performance gains and translating prototypes into reliable, user-facing tools.

SKILLS

Programming Languages	Python, JavaScript, C#, SQL
Machine Learning	PyTorch, Scikit-Learn, NumPy, Pandas
LLMs & NLP	LangChain, FastMCP, Pydantic AI
Computer Vision	OpenCV, Pose Estimation, Object Detection

EDUCATION

Nanyang Technological University *August 2021 – May 2025*
Bachelor of Computing, Computer Science

WORK EXPERIENCE

PhillipCapital Pte Ltd July 2025 – Present
AI Engineer

- Designed and implemented a NumPy-based collaborative filtering item-item recommendation system using historical transaction data, replacing a deprecated third-party library to improve maintainability and transparency.
- Refactored an ensemble-based customer churn prediction pipeline, reducing training time by 50% and inference time by 72% while preserving predictive performance.
- Contributed to the migration of an internal chatbot to an MCP-based architecture by modularizing tool functionality and auxiliary pre and post-processing services, improving extensibility and maintability.

National Institute of Education, Physical Education & Sports Science August 2024 – June 2025
Part-Time Research Assistant

- Developed a pose-based fencing lunge detection system using annotated match videos and joint coordinates, experimenting with LSTM, BiLSTM, and Transformer models over temporally-windowed pose sequences.

Panasonic R&D Center Singapore January 2024 – July 2024
IP3D Intern

- Built an internal document Q&A chatbot for internal knowledge access using Retrieval-Augmented Generation with locally hosted LLMs and embedding models, supporting configurable document chunking, retrieval, and answer generation methods.
- Designed a configurable benchmarking framework to systematically evaluate RAG pipelines across embedding models, chunking strategies, re-ranking, and answer generation models. Implemented automated evaluation using LLM-as-a-Judge to enable scalable comparison of answer quality across configurations.

ACADEMIC PROJECTS

Undergraduate Research Experience on Campus Program August 2023 – June 2024
Serving Insights: Improving Data-Driven Badminton Analytics with Computer Vision and Machine Learning

- Built an end-to-end badminton analytics pipeline in Python using OpenCV and OpenPose for court isolation, replay filtering, and homography-based mapping of player positions onto a standardized court plane.
- Curated and annotated shot data from 6 YONEX French Open 2023 matches, extracting joint angles and normalized inter-joint distance features using Sports2D.
- Benchmarked RNN, LSTM, and Conv2D models for grip classification across forehand, backhand, and overhead shots, achieving a best F1 score of 0.954 and presenting findings at the International Conference of Undergraduate Research 2024.

Undergraduate Research Experience on Campus Program August 2022 – June 2023
Football Analytics: Playing Styles of Singapore Premier League Teams

- Built an expected-goals model from 2019–2021 Singapore Premier League event logs by fitting a logistic regression estimator using shot location, distance to goal, and shot angle.
- Applied regression-tree analysis over eight possession-style percentages to derive interpretable rules for high-quality chances, identifying cross-heavy patterns producing up to 0.216 expected goals per shot and mapping tendencies to team-level profiles for scouting and match preparation.

PERSONAL PROJECTS

Unmute — Sign Language Translation Platform January 2026
3rd Place, Gemini 3 Hackathon

- Co-developed a text-to-sign language translation system that converts spoken or typed input into sequences of Singapore Sign Language (SgSL) signs using a curated NTU Sign Bank dataset containing over 1,000 unique Singapore-contextual signs.
- Leveraged the Gemini API for text understanding, sign sequence planning, and live video conferencing to support interactive communication.

Sports Event Trackers
`event-tracking-jkomar.pythonanywhere.com`

- Built an interactive multi-sport event tracking web app for Tennis, Badminton, Football, Basketball, and Floorball with coordinate mapping and action tagging.
- Enabled downstream analytics by exporting tagged events and match summaries to CSV and PDF reports.
- Introduced editable player and event names and keyboard shortcuts to improve quality-of-life and streamline workflows.
